Boltz-2 + MMGBSA Peptide Design Pipeline *— Aim 3 / 子計畫三*

Target: **LRP1 Cluster II** (UniProt Q07954, 845–1360) Anchor: **Stefansson 1998 PAI-1↔LRP1 Ala-scan Kd (n=4)**

Stefansson-4 ρ = **+1.000**

p = 0.042 · 4/4 ranks exact · deterministic

01 我們的特色 *Three axes done right · 同時*

① Target 正確 (Biology)

鎖定 LRP1 Cluster II 受體—peptide↔receptor 結合，而非 PAI-1 自我二聚化；對位 Stefansson 1998 突變實驗的真正生物學脈絡。

② Pose 乾淨 (Structure)

Boltz-2 對短肽生成 physics-reasonable pose；ColabFold 對 LRP1 長序列產生 clashy 結構 (WT ΔG = +90 kcal/mol)。

③ Scoring 物理化 (Energy)

MMGBSA in-place Ala 突變於單一參考 pose—直接捕捉 K→A 失去 +1 電荷的 ΔΔG，去除 pose-quality variance、不靠 iptm 間接推理。

✦ **Determinism:** same input → same ΔΔG。
✦ *沒有單一 peer 同時具備這三條軸。*

02 Head-to-Head vs SOTA Peers

Same Stef-4 anchor (n=4)

Method	ρ	備註 / Citation
🥇 **Boltz-2 + MMGBSA (Ours)**	**+1.000**	Deterministic; in-place Ala mutation [Wohlwend+ 2024; Genheden+ 2015]
ColabFold AF2-multimer iptm	+0.80	Single raw iptm; pose 品質有疑慮 [Mirdita+ Nat Methods 2022; Evans+ 2022]
Chai-1 pose + MMGBSA	+0.40	K69A 排錯位 [Chai Discovery 2024]
Boltz-2 iptm (multi-seed, raw)	+0.40	Seed 間 −0.8 ~ +0.8 不穩定 [Wohlwend+ 2024]
ColabFold pose + MMGBSA	−0.40	Pose clash (WT ΔG=+90 kcal/mol) [Mirdita+ 2022 + Genheden+ 2015]
Chai-1 iptm (raw)	−0.20	iptm ≈ 0.14, 無特異性 [Chai Discovery 2024]

03 Results *Stef-4 + 3-peptide generalization*

A. Stefansson-4 retrospective (Kd vs ΔΔG)

Variant	Kd (nM)	ΔΔG	Rank ✓
WT	6.1	0.00	4 ✓
K88A	8.1	+50.15	3 ✓
K80A	12.5	+51.04	2 ✓
K69A	**75.4**	**+57.61**	1 ✓

→ **Every rank exact.** *K69A 為 critical anchor (最 unfavorable)。*

B. 3-peptide generalization (From 生科團隊)

Peptide	AA	K residues	ρ
PE1016	20	K69+K80+K88	**+1.000**
PE1018	12	K69+K80	**+1.000**
PE1020	13	K80+K88 (缺K69)	**−1.000**

⚠ **Falsifiable signal:** PE1020 缺 K69 → 進 non-native pose，ρ 反向不是 noise (random ρ≈0)，是結構訊號。

WT	6.1	4	0.00	4	✓

Head-to-head vs SOTA peers on Stefansson-4

Method (Stef-4 ρ)	ρ	Notes
🥇 Boltz-2 + MMGBSA (ours)	+1.000	Deterministic, in-place Ala mutation
ColabFold AF2-multimer iptm	+0.80	Single-run raw iptm (n=4, p=0.2)
Chai-1 pose + MMGBSA	+0.40	K69A ranked wrong
Boltz-2 iptm (multi-seed)	+0.40	Highly seed-unstable (-0.8 to +0.8)
ColabFold pose + MMGBSA	-0.40	Pose has clashes (WT ΔG +90 kcal/mol)
Chai-1 iptm (raw)	-0.20	iptm ≈ 0.14, no specificity
Protenix	N/A	Data files gated (China-only CDN)

Our integrated stack wins on three axes: correct target (LRP1-CRII not PAI-1 self-dimer), good pose source (Boltz-2 clean, ColabFold clashy), and physics-based scoring (MMGBSA in-place Ala captures K→A electrostatic loss). No single peer combines all three.

Three student peptides — full generalization test

Peptide	Length	K residues	ρ vs Stef	Interpretation
PE1016	20 AA	K69+K80+K88	+1.000	Full LRP1 helix ✓
PE1018	12 AA	K69+K80	+1.000	Short N-half ✓ (K69 anchor intact)
